

FORMULA 1 ANALYTICS DASHBOARD

BY GOWSHIK A

Hello everyone. I am Gowshik. Today I'm going to present my Power BI project called Formula 1 Analytics Dashboard. Before explaining the dashboard, let me give a short introduction about Formula 1. Formula 1, also called F1, It is the highest level of car racing in the world. It is organized by the FIA which stand for r Fédération Internationale de l'Automobile. Every season, drivers and teams compete many races held in different countries to win the championship. The Reason I chose Formula 1 because I like this sport, and it has a lot of useful data. It includes driver details, team performance, race results, and circuit information. This helped me to build an interactive dashboard in Power BI to analyze the data easily

NOW, LET ME EXPLAIN MY DASHBOARD. IT HAS FOUR PAGES: HOME, DRIVERS, TEAMS, AND CIRCUITS

F1 DASHBOARD 2026 PROJECT • Last saved: Today at 11:22 AM

I used multiple data set to build this dashboard . I collected most of the data from Kaggle and for some missing information I used to gemini to help me gather and organize the information

Formula 1 – The Pinnacle of Motorsport

Formula 1 (F1) is the highest level of car racing in the world. It is a championship where the best drivers and teams compete using high-speed racing cars. The races, called Grand Prix, are held on famous circuits in different countries around the world. Throughout the season, drivers and teams earn points based on their race results to compete for the Drivers' Championship and the Constructors' Championship. Formula 1 is known for its advanced technology, exciting races, and strategic teamwork, making it one of the

Standard Weekend Races

Friday	Free Practice 1 (FP1)
Friday	Free Practice 2 (FP2)
Saturday	Free Practice 3 (FP3)
Saturday	Qualifying
Sunday	Grand Prix Race

Sprints Weekend Races

9th	02	Points
10th	01	Points
11th to 22	0	Points

DRIVERS

TEAMS

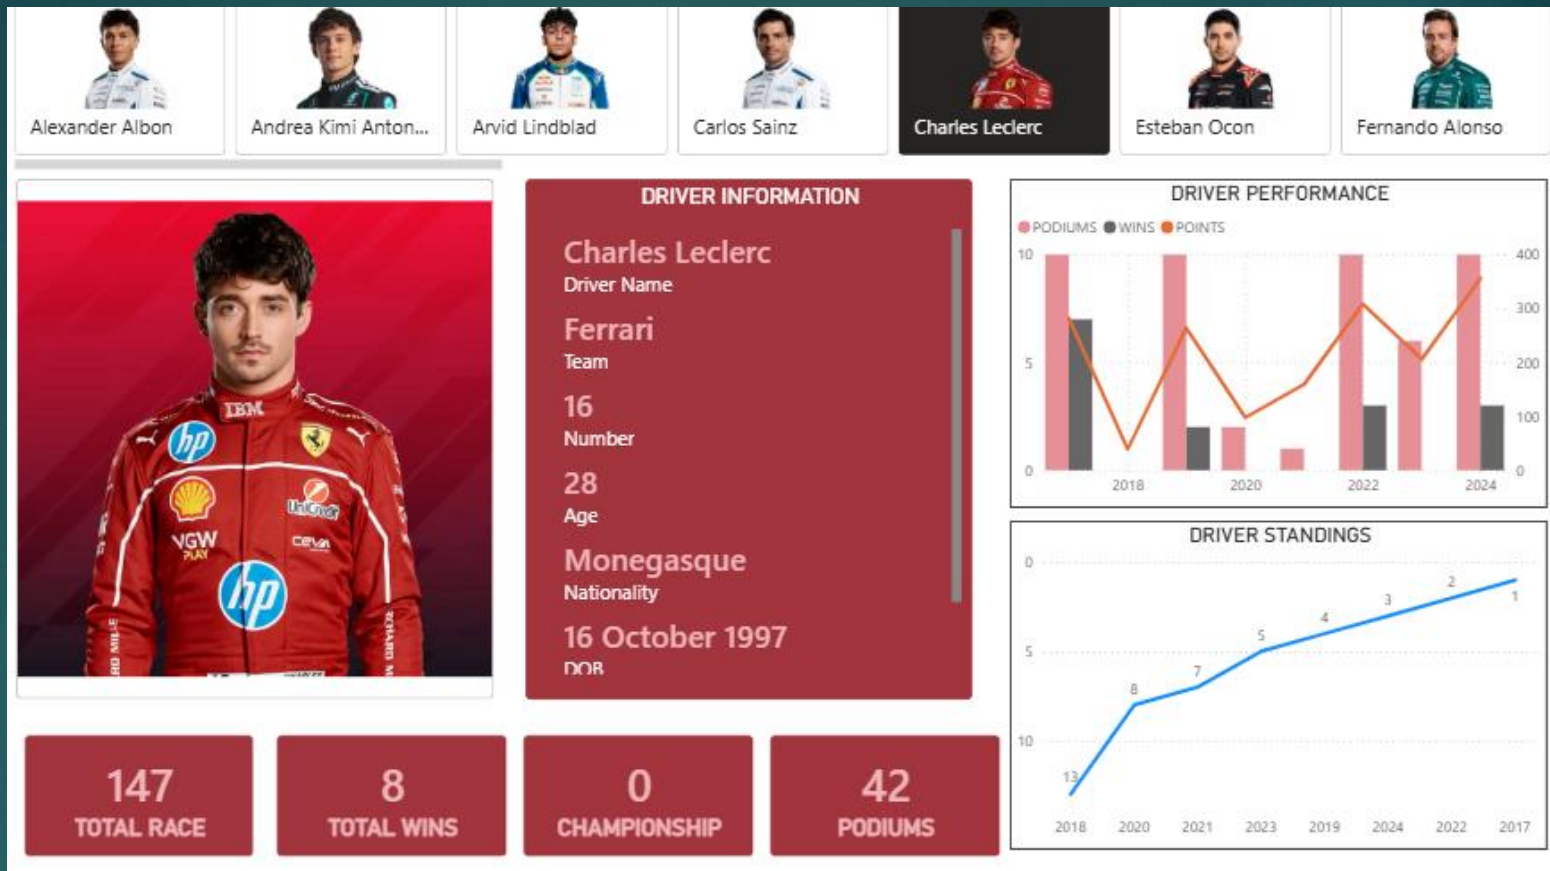

CIRCUITS

This is the Home page of my Dashboard. It gives a quick introduction about Formula 1. On the left side, I have explained what Formula 1 is and how the championship works.

In the middle, I have shown the Formula 1 race weekend schedule. A standard race weekend includes three practice sessions, one qualifying session, and the Grand Prix race. Some weekends also have Sprint races.

On the right side, I have displayed the Formula 1 points system. The winner gets 25 points, second place gets 18 points, and points are awarded up to 10th position.

At the bottom, I have added navigation buttons. Users can click Drivers, Teams, or Circuits to move on different pages in the dashboard.

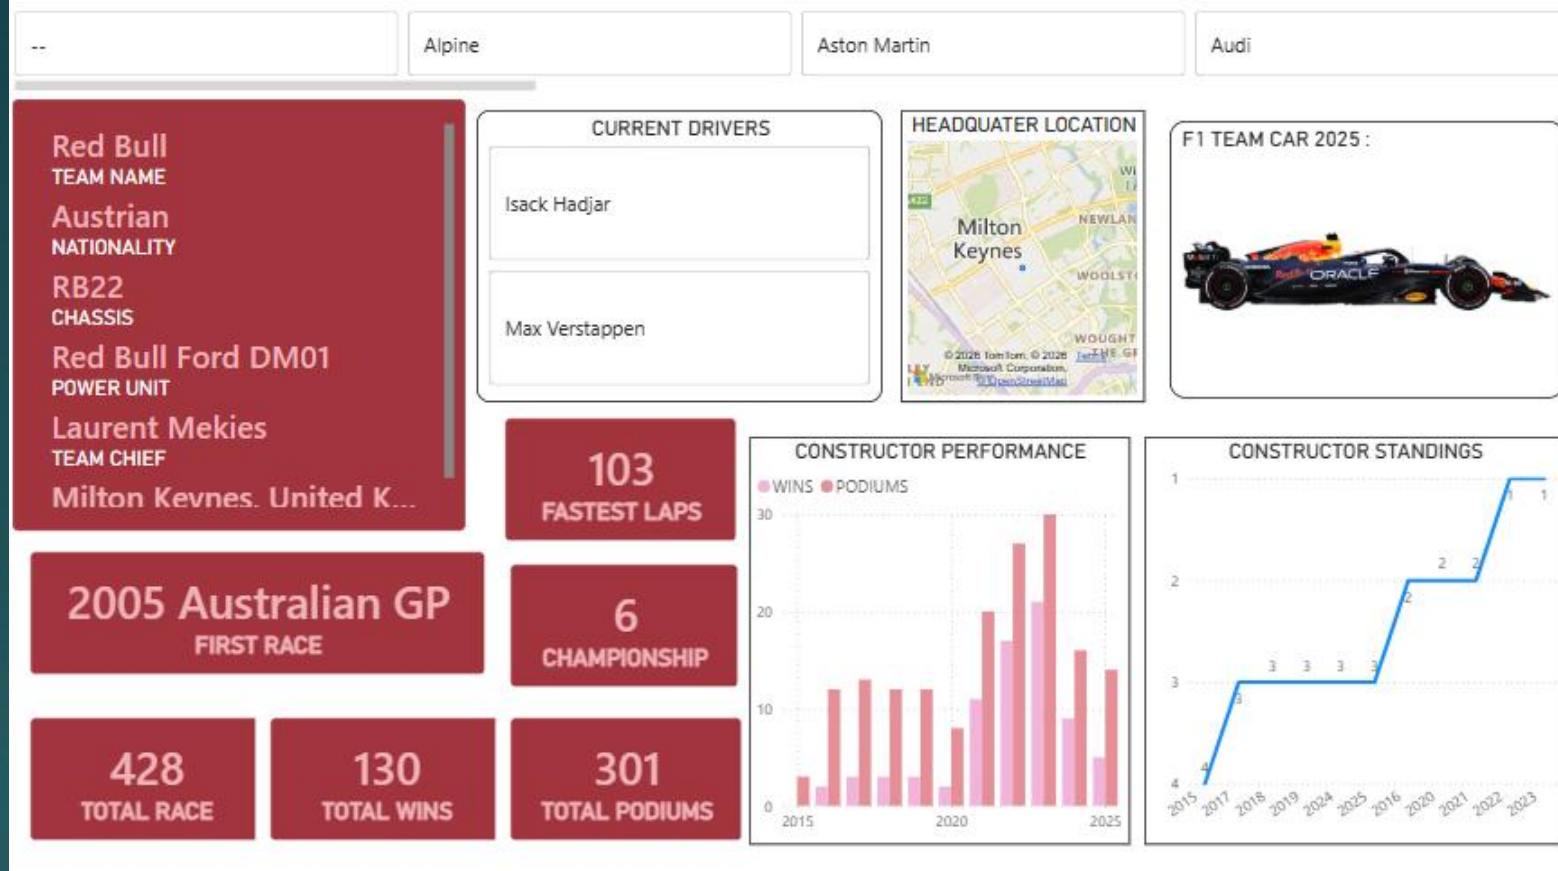

This is the Drivers page. On the top, I have added a driver selector. Users can click any driver to view their details and performance.

On the left side, I display the selected driver's image. In the center, I show the driver's information such as name, team, car number, age, nationality, and date of birth.

On the right side, I have two charts. The first chart shows the driver's performance over different seasons, including wins, podiums, and points. The second chart shows the driver's championship standings over the years, helping us to understand how their ranking has changed.

At the bottom, I have added KPI cards that display the driver's total races, total wins, championships, and podium finishes. These KPIs provide a quick summary about driver's career.

This page is makes it easy to compare the performance of different Formula 1 drivers.

This is the Teams. At the top, users can select any Formula 1 team."

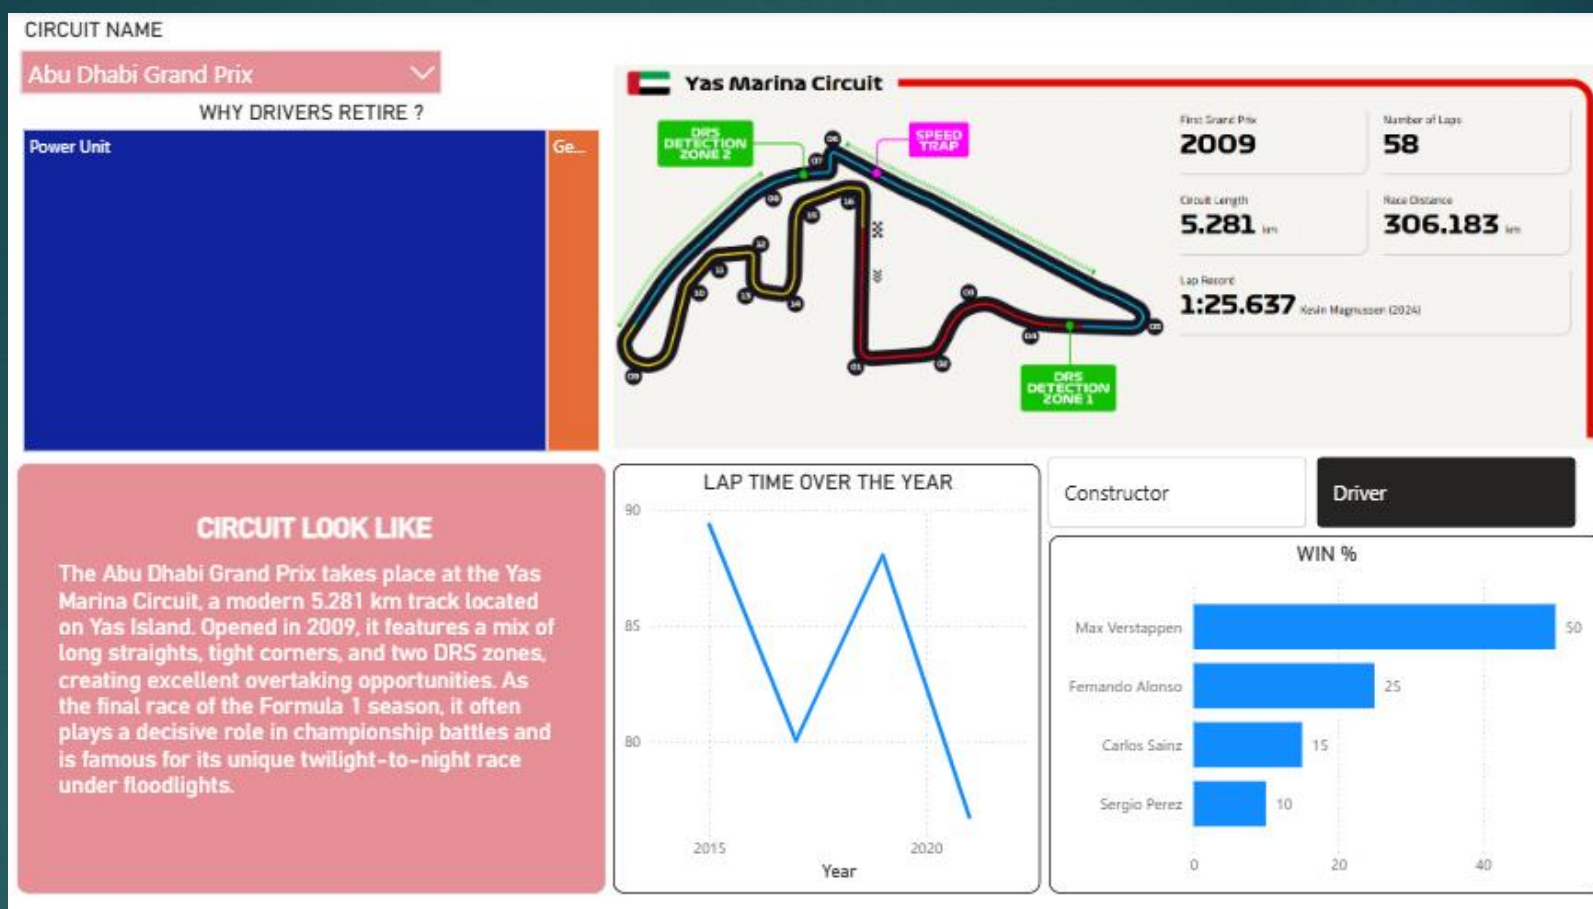

On the left side, I display the team's information, such as team name, nationality, chassis, power unit, team principal, and headquarters."

In the center, I show the current drivers of the selected team. I also display the total fastest laps, championships, total races, total wins, total podiums, and the year of the team's first race using KPI cards.

On the right side, I have added the team's headquarters location on a map and an image of the team's Formula 1 car.

At the bottom, the charts show the constructor's performance and championship standings over the years. These charts help us understand how the team's performance has changed over time.

When a different team is selected, all the information, charts, KPI cards, map, and car image update automatically as well

This is the Circuits page of my Dashboard. At the top, users can select any Formula 1 circuit from the dropdown list.

On the left side, I show the main reason why drivers retired from the race. Below that, I have added a short description about selected circuit .At the top center, I display the circuit layout. I also show important details such as the first Grand Prix, circuit length, number of laps, race distance, and lap record.

At the bottom, the line chart shows the lap time trend over the years . On the right side, users can switch between Constructor and Driver. The bar chart displays the win percentage for the selected constructor or driver at that circuit .

When the user selects a different circuit, all the information, charts, and statistics update automatically.This helps users to understand the characteristics and performance of each Formula 1 circuit.

Thank you. This is my Formula 1 Analytics Dashboard.
